

## Zhong Li

---

CONTACT INFORMATION	Sunnyvale, CA, USA <a href="mailto:zhonglee323@gmail.com">zhonglee323@gmail.com</a>	<a href="#">Personal website</a> <a href="#">Google scholar</a>
RESEARCH INTERESTS	Computer Vision and Graphics, Artificial Intelligence, Computational Photography, Image-based Rendering and Relighting, Light Fields, Neural Rendering, 3D Reconstruction, 3D Human Digitization.	
EDUCATION	<b>University of Delaware</b> , Newark, Delaware Ph.D, Computer Science, Winter 2019 <ul style="list-style-type: none"><li>• Advisors: Jingyi Yu, Ph.D</li></ul> <b>University of Missouri</b> , Columbia, Missouri M.S, Computer Science, Summer 2015 <ul style="list-style-type: none"><li>• Advisor: Ye Duan, Ph.D</li></ul>	
INDUSTRIAL EXPERIENCE	<b>Apple Inc, Cupertino, CA, USA</b> <i>Senior Computer Vision/Machine Learning Research Engineer: <b>July 2024 - Present</b></i> <ul style="list-style-type: none"><li>• <b>3D GenAI:</b> Developing core algorithms for 3D computer vision projects, focusing on reconstruction and generative AI techniques, leveraging machine learning models.</li></ul> <b>OPPO Research, Palo Alto, CA, USA</b> <i>Staff Research Scientist/Technical Lead: <b>March 2019 - July 2024</b></i> <ul style="list-style-type: none"><li>• <b>3D Photo and Video:</b> Leading a team in the development and delivery of an immersive six-degrees-of-freedom (6DoF) video and imaging experience for OPPO MR device.</li><li>• <b>TOF/RGB human motion capture:</b> Lead a team to successfully deliver an on-device real-time TOF/RGB human motion capture function for OPPO future AR wearable device and virtual human project.</li><li>• <b>One Shot Human 3D Digitization:</b> Served as the lead on a project to digitize humans from a single image. My responsibilities included the design and implementation of the core algorithm.</li></ul>

PROFESSIONAL  
ACTIVITIES

**Conference Program Committee Member and Reviewer:**

- SIGGRAPH 2024/CVPR 2021,2022,2023,2024 / NeurIPS 2023,2024
- ICCV 2021,2023/ ECCV 2022,2024 / ICLR 2024
- AAAI 2020,2021,2024,2025 / IJCAI 2023,2024 / ISMAR 2022,2024 / IEEE VR 2023 / ACCV 2024 / WACV 2024

**Journal Reviewer:**

- IEEE Transactions on Pattern Analysis and Machine Intelligence(**TPAMI**)
- International Journal of Computer Vision (**IJCV**)
- IEEE Transactions on Image Processing(**TIP**)
- IEEE Transactions on Circuits and Systems(**TCAS**)
- IEEE Transactions on Multimedia Computing Communications and Applications(**TOMM**)
- Computer&Graphics/Machine Vision&Applications/The Visual Computer Journal(**TVCJ**)  
/Image and Vision Computing/Science China/Display/Measurement/Computer  
Vision and Image Understanding(**CVIU**)

HONORS AND  
AWARDS

**Best Paper Award**, ACM VRCAI 2019(ACM SIGGRAPH International Conference on Virtual Reality Continuum and Its Applications in Industry.)  
**Best Poster Award**, SSIST 2018(ShanghaiTech Symposium on Information Science and Technology) **Outstanding Team Award**, OPPO Research Institute, 2019/2020/2021  
**Breakthrough Innovation Award**, OPPO Research Institute, 2020  
**Professional Development Award**, University of Delaware, 2018.  
**Excellent Undergraduate Thesis Award**, Hunan University of Sci and Tech, 2012

PATENT

- **Zhong Li**, and Jason Chieh-sheng Yang. "Dynamic local temporal-consistent textured mesh compression." U.S. Patent No. 10,417,806. 17 Sep. 2019.
- **Zhong Li**, Yi Xu, and Shuxue Quan. "Human body model reconstruction method and reconstruction system." U.S. Patent No. 11,928,778, March 12, 2024.
- Yuliang Guo, **Zhong Li**, Yi Xu, and Shuxue Quan. "Method for identifying human poses in an image, computer system, and non-transitory computer-readable medium." U.S. Patent No. 18/559,082.
- **Zhong Li**, Shuxue Quan, and Yi Xu. "Real-time hand-held markerless human motion recording and avatar rendering in a mobile platform" U.S. Patent 18/399,927.
- Celong Liu, Yi Xu, **Zhong Li**, and Shuxue Quan. "Method for rendering virtual object based on illumination estimation, method for training neural network, and related products." WO Patent No. 2,021,151,380 A1. 05 August. 2021
- **Zhong Li**, Yi Xu, and Shuxue Quan."System and method for virtual fitting." WO Patent No. 2,021,179,936 A1. 09 Sep. 2022
- **Zhong Li**, Yi Xu, and Shuxue Quan. "System and method for visualizing light rays in a scene." WO Patent No. 2,021,169,766 A. 02 Sep. 2021

## TECHNICAL SKILLS

- Programming Languages: Python, C/C++, Matlab, PHP, Mysql.
- Applications/Library platform: Pytorch, OpenCV, OpenGL, Android NDK, SNPE, ONNX, EIGEN, VCG library, CGAL, LATEX, Autodesk 3Ds Max, Autodesk Maya, Blender, Agisoft, Paraview.
- Operating Systems: Linux, Windows.

## ACADEMIC EXPERIENCE

**Graphics & Imaging Laboratory**, University of Delaware, Newark, USA  
Graduate Research Assistant **Sep 2015 - Dec 2018**  
Working on several projects related to 3D Computer Vision and Graphics

### • 3D Human Body Non-Rigid Reconstruction

In multi-view human body capture systems, the recovered 3D geometry or even the acquired imagery data can be heavily corrupted due to occlusions, noise, limited field-of-view, etc. We present a graph-based non-rigid shape registration framework that can simultaneously recover 3D human body geometry and estimate pose/motion at high fidelity.

### • 4D Dynamic Human Mesh Compression

The availability of affordable 3D full body reconstruction systems has given rise to free-viewpoint video (FVV) of human shapes. Most existing solutions produce temporally uncorrelated point clouds or meshes with unknown vertex correspondences. Individually compressing each frame is ineffective and still yields to ultra-large data sizes. We present an end-to-end deep learning scheme to establish dense shape correspondences and subsequently compress the data.

### • Human Body Semantic Segmentation.

We developed a novel technique that we call Pose2Body that robustly conducts human parts segmentation based on the pose estimation results. We partition an image into superpixels and set out to assign a segment label to each superpixel most consistent with the pose. We design special feature vectors for every superpixel-label assignment as well as superpixel-superpixel pairs and model optimal labeling as to solve for a conditional random field (CRF).

### • Light Field 3D Scanner

We present a novel light field structure-from-motion (SfM) framework for reliable 3D object reconstruction. Specifically, we use the light field (LF) camera such as Lytro and Raytrix as a virtual 3D scanner.

**CG & Image Understanding Lab**, University of Missouri, Columbia, USA  
Completed the Master Thesis **Feb 2013 - June 2015**

### • 3D Face Reconstruction and Tracking Using SIFT Iterative Closest Points By Consumer Depth Camera

Develop an automatic 3D face reconstruction and pose estimation framework using consumer depth camera

## TEACHING EXPERIENCE

- 15 fall: CISC 106 GEN COMPUTER SCIEN FOR ENGNR
- 16 spring: CISC 220 DATA STRUCTURE
